5. Key Insights and Recommendations

• **Best channels:** Instagram (23.7%) and Email (23.6%) convert best; **Google Organic** is lowest (15.5%) despite the largest volume (265 sessions). Improve organic landing content and CTAs.

• **Abandonment:** 40.1% of started registrations are not completed. Shorten the form, add progress indicator and save-progress/reminder emails.

• **Drop-off pages:** prioritise fixing / and /verify; learn from /register.

• **Devices:** Desktop converts best (21.8%) and Tablet lowest (10.9%); mobile is 66% of traffic, so mobile UX matters most.

• **Bounce:** overall bounce is low (4.9%) but 18.4% of sessions are single-page, so engagement on first page can still improve.

Data cleaning: 900 rows checked; 0 duplicates, 0 missing values, valid dates, consistent categories, no logical conflicts (every registered user had started registration; bounced sessions all had 1 pageview). Added fields: Month, SourceGroup, numeric flags.
